

bott vario

Professional Vehicle Equipment
for your Peugeot

bott

Estate cars | Bipper | Partner | Expert | Boxer

Two brands – one system

bott vario | Feel at home in your Peugeot

bott tailors equipment to meet your needs in accordance with specific industry requirements.

You've decided to get a Peugeot. In taking this decision you have created the perfect platform on which to build a bott vario in-vehicle storage solution. Specific bott vario components have been created to match the exact dimensions and manufacturer's fixing points of your Peugeot vehicle. This ensures the most efficient use of available storage space, a safe and secure installation, and when the time comes - a clean and easy system removal. This applies to pre-configured standard storage modules and customer specific solutions that have been designed, assembled and installed to meet individual requirements. The end result is that your Peugeot and your bott vario in-vehicle storage solution combine to form a single fully integrated system.

bott vario | The in-vehicle equipment –
Distinctive, just like your industry

Our approach to verification.

To build confidence in the safety of your designs, it's always best to get your work checked by a third party. bott voluntarily performs crash tests in conjunction with the automotive industry. Here independent experts test the safety of fully laden in-vehicle equipment.

Are the extreme forces successfully dissipated by the deformation of the bott designed components?

We check and validate all of the lab based pavé, load and shear tests to confirm that the bott solution will withstand such extreme conditions. Realistic in every detail, a vehicle collision is simulated at a speed of 50 km/h. The vehicle is subjected to an acceleration of 20g over a period of 30 milliseconds, in accordance with ECE R44 guidelines.

And when the test was finished, the results were clear. The crash tests showed that both drivers and passengers can safely rely on bott vario.

The video of the crash test:

J0791SF002

bott vario | Tailored to your success

Unforeseen issues can be an everyday occurrence in service and installation work. The highest levels of creativity and professionalism are needed if you are to get the job done. Being prepared for every eventuality means having the right tools, the right fixings and the necessary spare parts at your fingertips. In short - you need the right in-vehicle equipment solution.

The primary goal of in-vehicle equipment is to optimise the organisation of all available storage space. Essential tools and equipment need to be safely transported in the smallest possible space. Whilst on site, quick and easy access to clearly laid out utensils is essential for productive work.

reddot design award
best of the best 2011

- **modularity**
individual planning and configuration for optimal organisation of your workspace, tailored precisely to your needs.
- **safety**
high quality surface finish and crash tested in accordance with ECE R44, because your safety takes priority.
- **lightweight**
intelligent material combinations and logical component design, for increased payloads with reduced weight.

- **quality**
uncompromising robustness and stability, designed to withstand many years of use.
- **aesthetics**
the appearance of bott vario transforms the workplace and guarantees a superior image.

Optimal workspace organisation

bott vario Workspace Organisation

bott vario | Fulfilling every requirement

bott individually designs your equipment for your particular requirements.

Being prepared for every eventuality means being ready for any unexpected task. To follow this philosophy means always having a range of tools and materials on hand, because costly delays due to material collections or forgotten parts are no more acceptable to your customer than they are to you. Your new van has plenty of space to accommodate what needs to be transported. But the more that you fit in, the greater the challenges in maintaining organisation. bott vario ensures a convenient overview of the equipment on-board.

Frequently used tools and materials can be conveniently unloaded through the side and back doors, without ever needing to enter the vehicle. Such ergonomically designed storage spaces can be tailored to your particular requirements with the help of your local bott service partner.

The result

Analysis

Your bags are ready for loading. Their exact storage location will be decided by you in consultation with your professional bott planning specialist.

Design and planning

Your bott service partner configures and organises your vehicle workspace based on an analysis of your requirements.

Certified installation

Only trained professionals are assigned to install the equipment in your vehicle. That's because your safety takes priority.

Handover

At bott, it's a given that you'll receive introductory training on your system, including lots of advice about service and maintenance.

Local Service

There's a certified bott service partner near you.

Your service partner is available around the clock to answer questions about your in-vehicle equipment – before, during, and after installation.

bott vario | Protecting valuable cargo

Floor and side lining panels

Protect your vehicle from cargo that might damage interior surfaces. A roof liner with optional integrated lighting provides the ideal finishing touch.

bott vario floor panels

- Light weight, moisture-resistant beech plywood flooring (thickness = 12 mm)
- Surface finish: robust, anti-slip synthetic resin film coating
- Edges: with a waterproof surface coating
- Access to vehicle lashing eyes through removable flooring caps
- Includes fixing kit

vario protect-light side lining panels

- Corrugated polypropylene panels (thickness = 4 mm)
- extremely lightweight
- Light grey (RAL 7035)
- Includes fixing kit

alternative side lining materials are available:

vario protect-cargo
Wood composite
(thickness 4 mm),
Light grey (RAL 7035)

vario protect-plus
Aluminium,
extremely impact-resistant
with perforated panel

For vehicles with different divider designs, the drop-front shelf must be adjusted during assembly (cutting edge is marked).

Due to its unique modularity, the bott vario system is perfectly suited to creating tailored solutions to meet specific customer requirements.

In many situations however, standard modules can present a convenient and acceptable alternative to bespoke storage solution design. They combine many years of bott design experience and offer standard pre-configured solutions for all trades and applications.

Whether it's a Bipper, a Partner, Expert, or a Boxer; the driver's side or the passenger's side; drawers or storage boxes; bott standard modules will fit into your vehicle perfectly.

Pre-configured modules offer a quick and convenient alternative to bespoke solution design.
